**WATS Feature Release Note
Dynamic Action Menu 25.1**

Major Feature Areas

Dynamic Action menu	3
Key Updates.....	3

Dynamic Action menu

The upgraded Action Menu delivers a smoother and more efficient experience, retaining all its essential features while introducing new enhancements and refinements for improved usability and functionality.

Key Updates

Two-Pane Design

- The Action Menu now includes two distinct panes:
 - **Left Pane:** Retains familiar functionality with an added ability to search headings and subheadings when navigating away from modules.
 - **Right Pane:** Grants access to Wats Alvea, a tool for identifying potential first-pass yield improvements and guiding further inspection efforts.

Improved Serial Number Navigation

- Navigating from grids without serial numbers into serial number history will now auto-populate the filter with up to 1,000 latest registered serial numbers.
- If a serial number is part of the selected grid row, it will be prioritized over the auto-population.

Integrated Wats Alvea Functionality

- Wats Alvea suggestions will automatically activate when the right pane is open or when accessing the Action Menu with the pane open.

These updates are designed to optimize workflow efficiency and deliver insights. The Action Menu is implemented in Test Reports, Dynamic Yield, and the Process Heatmap.
