WATS Server 2016.2 Release Note

WATS Server 2016.2 Release

This release overview contains information about new features in WATS Server 2016.2

For more information about WATS, please visit www.virinco.com/wats

Major Feature Areas

- New UUT Report
 - Supporting TestStand Additional Results
- Miscellaneous data as dimensions •
- WATS Control Panel in HTML
- System Manger
 - Virtual Levels/Restrict access to Users
- Serial/MAC Address Module
- Repair •
 - BOM integration (and Vendor list)
 - Attach file to UUR report
 - Repair analysis
- Miscellaneous •
 - o New login
 - Remember settings
 - WF, See all details list
 - MI, Require UUR tristate
 - o Export to Excel Grid/unit details from Repair Analysis

New UUT report

This version of WATS includes a complete rewrite of the UUT report. The report will still feature the same well-known structure as the old report, but will include the following new features:

Additional Results

The report now support Additional Results from NI TestStand for any steps containing such data. This includes display of one and two-dimensional numeric arrays as graphs.

ET_NLT - AdditionalRes	sults (step time: 0.0001036)			/
Measurement 0	Low limit 9	High limit 11	Units	Comparison type GELE (>= AND <=)
Status: Passed				
6				
5.5				
4.5				
4				
3.5				
2.5				
2				
1.5				
0		1		2

Touch Friendly Design

The new UUT report provides a new and responsive design, which better enables viewing and navigation of the report, especially on tablet and mobile devices.

Improved Loading

The new UUT report handles loading of data in a new way, decreasing the server load, and providing a more dynamic loading process. Data will be loaded and rendered as needed. Users should especially see an increase in performance for larger reports, especially those containing many graphs.

Redesigned Chart

The chart for XY Graph steps now includes zooming and panning. No more need to open the chart in advanced view to view data in detail.

Report Summary

A summary will now show the number of steps which qualifies as a given status (passed, failed etc.).

	Step status: 🚽 Passed: 42 🗙 Failed: 40 🚽 Done: 35 💛 Skipped: 52	
Goto step which caused UUT Failed.		
Software File Name: C:\TFSOnline\WATS\Main\Teststand\Test - Version: 1.1.0.44		

UUT Failed

The report will now display the step, which caused the UUT report to fail. This step is marked with a red header (Error and Terminated status from TestStand will not set this flag).

String Value Test (step time: 0.0002017) - Caused UUT Failed	X	
String value	String limit	Comparison type
this is a string result	this is a string limit	Ignore Case

Step drilldown

It is now possible to assign a step in which the report should scroll to in its URL path. This step is marked with an orange header.

Linking to Serial Number History

Sub units listed in the report header will now link to the serial number history of the unit.

Toggle Done and Skipped steps

It is now possible to toggle all steps which has the status of done and skipped.

Update Settings in the report

Choices for chart size, numeric format and whether step time and Done/Skipped steps are displayed will automatically be remembered on a per user basis.

▼ ● Show/hide all ■							
💉 Edit header							
Table view							
L Export WSXF							
Chart height: 400 px							
Hide Done and Skipped steps Hide step time							
e Help							

Export to WSFX

The new report offers export to the WATS Standard XML Format (WSXF): <u>https://virinco.zendesk.com/hc/en-us/articles/207424643-Wats-Standard-Xml-Format-WSXF-</u>

Keyboard Hotkeys

When viewing the report on a device with a keyboard, several actions can now be performed using predefined hotkeys. This provides a more efficient way to use and navigate the report.

The following list describes the hotkeys included in version 2016.2:

ACTIONS	
Expand all steps (show all).	Shift + a + s
Contract all steps (hide all).	Shift + a + h
Toggle (show or hide) done and skipped steps.	Shift + a + d
Open table view (previously saveable version).	Shift + a + t
Activate edit header mode.	Shift + a + e
FORMATS	
Display value only (the "none" format).	Shift + f + n
Format numeric values as binary.	Shift + f + b
Format numeric values as decimal	Shift + f + d
Format numeric values as hexadecimal.	Shift + f + h
Format numeric values as integer	Shift + f + i
Format numeric values on scientific (exponential) format.	Shift + f + s
SCROLL	
Scroll to the step causing UUT failure.	Shift + s + f
Scroll to the report header	Shift + s + h
Scroll to drill down step (if applicable)	Shift + s + d
MOUSE CLICKS	
Show / hide all for a single step / group	Ctrl + mouse click

Miscellaneous data as dimensions

Miscellaneous data can now be used as dimensions to calculate Yield and Volume. These options are available in the Rolled Throughput yield and Product Yield reports.

Miscellaneous data are now spilt into 2 search boxes (in these reports), Misc Info Desc (Description) and Misc Info String (Value). Misc Info Desc value must be matching text while Misc Info String support wildcard search as example below. The value of description is new header text in level 2 and the expandable list in

WATS Server Release Note

level 3 display all the misc string values found in the matching reports as expandable groups.

WATS Control Panel in HTML

The release introduce a new version of the Control Panel (CP) written in a plug-in free HTML environment partly replacing the previous version based on MS Silverlight. Using the CP will allow seamlessly moving between the old and the new version based on requested features.

Configure/Settings

All the common menus in this section is now updated using HTML

Account

A new account page has been added allowing the skyWATS.com account owner to administrate Users and restricted access and edit User Levels and WATS Clients. <u>https://virinco.zendesk.com/hc/en-us/articles/210652223-Account</u>

System Manager

The new WATS System Manager provides detailed information about the WATS infrastructure. All WATS Servers and WATS Clients are displayed hierarchically in a tree-view.

This release introduce *Web Clients* and *Virtual Levels*. Every WATS installation has one Web Client and all users are linked to it by default. You can make new Virtual Levels and Web Clients building an advanced system overview:

Туре	Virtual	Description
WATS Server:	NO	A Local Server connected to the Master Server installed with its own web portal and local database. (Not applicable for skyWATS.com)
WATS Client:	NO	A computer running the WATS Client software. The WATS Client communicates with a WATS Server and will by default show up underneath this server in the hierarchy. A Client may be dragged into a virtual level to form a custom hierarchy.
Web Client:	YES	All users defined in the Users/Account view must be member of a Web Client. This means, that reports created by this User in the Operator Interface (Repair (UUR), Manual Inspection (MI Report)) will be linked to this Web Client. A Web Client may be dragged into a virtual level to form a custom hierarchy.
Virtual Level:	YES	A custom named level in the hierarchy. You may drag WATS Clients, Web Clients, Servers or even other Virtual Levels into a virtual level to create a custom hierarchy. Virtual levels will be available in the Level drop down in the Report Filter and as an item in the restrict to level column in the Users/Account view.

gdanisteen	Gunnar Danielsen	gunnar dankstren@	Manager	EnkaCN							

have access to UUT and UUR reports logged form Clients, Servers or Levels below the selected restricted level.

Miscellaneous

- New *Comment* pane allowing you to add comments to a Client or Server in the hierarchy
- Inactive Clients are now set after 24 hours (previously 1 hour)
- Export the System Manager items to an Excel file

MAC Address Module

A new *Production Manager* main menu has been added to the Control Panel. Navigate to the *Production Manager* sub-menu to access the dashboard. Use the dashboard to upload or create a range of addresses and see address pool status. Use the WATS Client API to read and download addresses locally at the test station.

NOTE: This feature require additional license. Please contact <u>sales@virinco.com</u>.

Repair

BOM integration

WATS can now import BOM list from other ERP/PDM systems and make use of this in the Repair Report GUI. When operator select a component reference during repair, a drop down list of valid references linked to that Part Number and Revision will appear. Configuring the *Processes* >*Is Repair* Operation allow to select BOM Binding

- Required: User must select from list
- Optional: User can select from list or type the value
- Never: User type the value

Cake diagrams

Cake diagrams has been added to all sub reports in addition to Pareto charts.

Export data

A new option in the *Action* menu allow you to export detailed data from the grid records to excel (Serial Number, Part Number, etc.) in addition to the data grid table.

Miscellaneous

Auto remember options

The WATS Web Applications will remember more of the selected User options made during sessions. As example, the "Top 10 Failures" options in *Test Step yield & analysis* and UUT Report options. In addition, the Test Operation list in the filter will show "top 10 favorites" on top of the complete process list.
