New HTML-based Manual Inspection in PREVIEW

This release introduces the new Manual Inspection made in HTML5, which will replace the Silverlight version of this feature. For now, both the HTML5 and Silverlight versions are accessible.

Security/Performance enhancements and bugfixes

This release is basically a service release of the 18.2 version. Several bugfixes and performance improvements is implemented.

- Debug data inserted in ClientSyslog (even if debug is turned off)
- Repair Wizard crash when selecting a failed UUT with no failed test steps
- Unit Verification report does not show all processes
- Table View UUT Report (Printable) display wrong Local StartDate time
- Exclusion of "Measurement" in Export Wizard can cause exception
- Quarantined reports: user not found in the client hierarchy
- Wrong date behaviour when loading shared filters
- Importing UUT WSXF reports - Chart data traps wsxf imports in quarantine
- Click drilldown form periodic yield - "Past In Run" chart doesn't work
- Reports not found in storage if duplicate report is received before previous report is processed
- Double scrollbar in processes
- Drilldown to eventlog details doesn't work
- UUT does not filter out INF and NaN values correctly when calculating min and max y values
- Menu sometimes blank when entering the Reporting module
- Missing scrollbar in account page
- Primary contact does not have access to Account page
